-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-41 are rejected under 35 U.S.C. 102(b) as being anticipated by Anderson et al. (US 6,096,469).

Anderson et al. discloses a method of making mesoporous silica particles in which an aqueous mixture of a source of silica, a surfactant (CTABr), a cosolvent (methanol) and a catalyst (ammonium hydroxide) are reacted, dried and calcined. See Examples 1 and 2, col's 12-13. The resultant particles are ellipsoidal and spherical having sizes of 250-400 nm (i.e., 0.250-0.400  $\mu\text{m}$ ) and 250-500 nm. Id. The surfactant:cosolvent ratios of Examples 1 and 2 are 0.007 and 0.007, respectively.

The reference fails to the pore size, surface area, or mean pore volume of the cited examples, or the description in claims 1-14 regarding "chain stacks" and nanotubes. However, the reference discloses that the inventive process forms pores in the size of 2-4 nm. See col. 6, line 56 to col. 7, line 1. Moreover, the process of making is identical to the presently claimed process. An identical process would necessarily result in an identical product. For these reasons, the properties recited in the present claims are assumed to be inherent to the reference product. See MPEP 2112.

The recitations of claims 16-41 can be found in the Examples 1 and 2, col's 12-13.

*Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
